Education

The University of Texas at Dallas

Master's of Science in Computer Science - Intelligent Systems

Expected Graduation: 05/2027

Richardson, TX

The University of Texas at Dallas

Bachelor's of Science in Computer Science, Cognitive Science | National Merit Scholar

08/2022 – 05/2026

Richardson, TX

- Relevant Coursework: Data Structures & Algorithms, Advanced Algorithms and Design, Systems Programming in UNIX, Software Engineering, Intro to Machine Learning, Computer Vision, Database Systems

Relevant Experience

Walmart Global Tech

06/2025 – 08/2025

Software Engineer Intern

Bentonville, AR

- Developed the **1st** dynamic filtering system for the Compliance Lookup and Management Portal, a platform that manages rules for handling items during returns and merchandise shipments, resulting in optimized querying of **600+** rules for Walmart associates. Deployed using **Kubernetes** and **Docker**.
- Created a **Spring Boot** API endpoint with **PostgreSQL** and **Swagger.UI** to fetch rules based on service tag, and built a system in **Java** that dynamically filters rules across any parameter while synchronizing results with search queries.
- Built custom reusable UI components in **React** and **Typescript** – a state-aware filtering module and dynamic dropdown menu.
- Implemented and executed comprehensive **unit, functional, integration, and end-to-end tests** across backend services and UI components using **JUnit**, **Spring Test**, and **Jest** to ensure code quality and system reliability.

Projects

Insyte | *React, Next.js, Typescript, Flask, Python, AWS Lambda, AWS DynamoDB, Claude Anthropic LLM, OpenAI, LangGraph*

- Built a web application for **CBRE** at HackUTD to allow Real Estate Property Managers and Clients to easily explore, manage, and make data-driven decisions about commercial properties.
- Developed a Smart Property Search using **Agentic AI** with **LangGraph** and **Anthropic LLMs**, including agents for natural language query parsing, geolocation (latitude/longitude extraction), and property visualization via Leaflet-based interactive map.
- Implemented an **OpenAI** chatbot for CBRE clients to query real estate properties, documents, and related information, providing instant insights for faster decision-making.

ToborFairy Scheduler - 1st Place WEHack | *HTML, CSS, JS, Google Calendar API, Google Chrome Extension*

- Developed a Google Chrome Extension using **Javascript**, **HTML/CSS**, and the **Google Calendar API**, that recommends events based on Google Calendar availability and seamlessly adds those events to the back to your calendar.
- Implemented **HTML/CSS** (for **1st** time) within **24** hours, creating a fully functional and responsive frontend for an extension to improve campus engagement and career success for **90.1%** of engineering students.
- Won **1st** place overall and **3rd** place for L3Harris Challenge at WEHack (Dallas' Largest Inclusive Hackathon).

Catch Up | *Flutter SDK, Dart, FFmpeg, Firebase, Git, Github, Figma*

- Created a mobile application with a team of **4** through the **software development lifecycle** to break the barrier between reality and fiction in social media and enhance communication among friends through group vlog-style movies.
- Integrated **Firebase authentication, storage (1 GB)**, and **real-time database** with a **Flutter SDK** frontend and **Dart** backend to support secure video uploads, daily video recording, group communication, and user authentication.
- Integrated **FFmpeg** for multi-video processing/concatenation with robust error handling and testing to ensure system reliability.

Leadership

Director of Projects | *ACM UTD*

11/2024 – Current

- Managed the projects division of the **largest** computer science organization at UT Dallas with **800+** members.
- Coached **11** uniquely skilled project team leads while guiding almost **50** program participants through engaging workshops, socials, and project development sessions, as well as communicating with industry professionals from **CBRE, JPMC, Amazon**, etc..
- Carried technical knowledge to support teams building full-stack applications with technologies like **Node, React, AWS, Mongo**

Development Coordinator | *WEHack (Largest Inclusive Hackathon in TX)*

06/2024 – Current

- Led WEHack's technical coordination and managed project evaluations through Jury to ensure smooth hackathon operations.
- Implemented custom UI components for the WEHack website and HackPortal using **React, Next.js, TailwindCSS**, and **Typescript**, including a foldable map FAQ and About section, to deliver an intuitive interface for hundreds of participants.

Project Manager of Projects | *ACM UTD*

12/2023 – 11/2024

- Led **2** different teams of **4** developers through the software development lifecycle employing scrum-based project management techniques such as sprint planning and weekly standups for a competition spanning **10** weeks.
- Taught key concepts including visual design, git version control, databases, system architecture and design, and professional speech and communication best practices.

Technical Skills

Languages: Python, Javascript (React.js, Next.js, Node.js, Express.js, React Native), TypeScript, HTML/CSS, Java, SQL, C/C++, R
Tools/Platforms: Git, GitHub, Claude Anthropic, OpenAI, LangGraph, Flask, AWS (Lambda, DybnameDB), Firebase, PostgreSQL, MongoDB, Docker, Kubernetes, Jira, Flutter SDK, Spring Boot, DBeaver, Linux, Swagger.UI, Maven, TailwindCSS

Other: Full-Stack Development, UI/UX, APIs, Project Management, Interpersonal Communication, Team Collaboration, Agile Development, Problem-Solving, Object-Oriented Design Skills, Unit Testing, Functional Testing, Integration Testing, End-to-End Testing
